U.S. exports of horticultural products to Asia are rebounding from the financial woes that started in 1998. From June 2000 to May 2001, total U.S. horticultural exports to Asia totaled \$3.5 billion, up 9 percent from the same period the preceding years. The Asian region accounts for more than a third of total U.S. horticultural exports. Japan, with about a 50 percent share, is the largest market in Asia, followed by Hong Kong, Taiwan, South Korea, and China. U.S. horticultural exports to Japan in 2000/01 were valued at \$1.7 billion. Exports to Hong Kong, the second largest market, exceeded \$428 million in 2000/01, accounting for 12 percent of U.S. horticultural sales to the region. Exports to Taiwan accounted for 10 percent of the Asian market in 2000/01, with an export value of more than \$360 million. South Korea accounted for 8 percent of the market, totaling approximately \$290 million. China has emerged as a new promising market for U.S. horticultural exports. In 2000/01, U.S. horticultural exports to China exceeded \$143 million, posting a record and now accounting for 4 percent of sales in the region. The Agreement on Agriculture signed in April 1999 and the Bilateral WTO Market Access Agreement of November 1999 are expected to continue to boost U.S. horticultural product exports to China. Citrus products and fresh deciduous fruits are among the leading U.S. horticultural exports to the Asian region. Other promising horticultural products include frozen vegetables, tree nuts, and fresh vegetables.

## Export Summary

### June 2001

U.S. exports of horticultural products to all countries in June totaled \$978 million, an increase of 2 percent from the same month a year earlier. The only categories with increases in June were essential oils (up 61 percent to \$92 million) and processed fruit (up 4 percent to \$54 million). All of the other categories declined, with fruit and vegetable juices showing the greatest decline (down 10 percent from June 2000, to \$65 million).

June exports to Canada, the largest market, were up 2 percent from June 2000, to \$332 million. Exports to the European Union (EU) and Japan were up 22 percent and down 11 percent, respectively to \$183 million and \$165 million. Exports to Mexico rose 9 percent to \$78 million. Exports to China showed the most dramatic jump for June 2001, up 90 percent from June 2000, to \$14 million. Exports to Taiwan, Hong Kong, and Korea dropped to \$30 million (down 2 percent), \$26 million (down 12 percent), and \$24 million (down 1 percent), respectively, from June 2000.

Exports for the October-June 2000/01 period were up 8 percent from the same period in 1999/2000 to \$8.4 billion. Essential oil exports have shown the most growth, up 24 percent to \$523 million for the October-June 2000/01 period. Tree nut exports are up 20 percent to \$885 million, while fresh fruit exports are up 12 percent to \$1.6 billion, and fresh vegetable exports are up 6 percent to \$1.0 billion. The fastest growing markets for FY 2001 to date are: China, up 95 percent; Malaysia, up 65 percent; the Philippines, up 17 percent; Mexico, up 14 percent; Taiwan, up 13 percent; the EU, up 13 percent; and Hong Kong, up 11 percent. Exports to Japan are down 2 percent for the October-June 2000/01 period compared with the same period last year.

---

**New U.S. Trade Internet System Prompts Elimination of Statistical Tables and Charts on U.S. Horticultural Product Trade, Effective with the October 2001 Issue of “World Horticultural Trade and Export Opportunities.”**

The public now has unlimited access to the most up-to-date data on U.S. exports and imports of agricultural, fishery, and forestry products, to the 10-digit Harmonized System (HS) classification code level. The U.S. Trade Internet System allows users the flexibility to customize their data searches and save their criteria for repeated use. Users can obtain value or volume data for selected HS codes or commodity groupings to track trends going back to 1989.

To view the site go to <http://www.fas.usda.gov/ustrade/>

For more information on the U.S. Trade Internet System, e-mail [usthelp@fas.usda.gov](mailto:usthelp@fas.usda.gov)

Given the availability of these statistics on the internet, the Horticultural and Tropical Products Division intends to stop publishing statistical tables and charts on U.S. horticultural product trade, beginning with the October 2001 issue. The following tables and charts will be discontinued: U.S. Horticultural Product and Market Export Summaries; U.S. Exports of Selected Horticultural Products Summary and By Country of Destination; U.S. Imports of Selected Horticultural Products Summary and By Country of Origin. For questions or comments on this decision, please contact Nancy Hirschhorn (202)720-2974.

To access **FAS Attache Reports** on line, please go to the following Internet address:

[Http:// www.fas.usda.gov/scripts/attachrep/default.asp](http://www.fas.usda.gov/scripts/attachrep/default.asp)

Search through the country and market reports prepared by FAS attaches covering over 20 horticultural and tropical product commodities and nearly 130 countries.

---

## Asparagus Production and Trade in Selected Countries

Fresh asparagus production in calendar year 2001 in nine selected countries is estimated at 470,699 tons, down 3 percent from 2000. Peru, the world's largest producer accounted for 38 percent of the total, followed by the United States, Spain, and Mexico. Asparagus exports from seven selected countries during this same period are estimated at 145,000 tons, down 5 percent from the previous year, due largely to over-supply and reduced international prices. Mexico and the United States accounted for the biggest declines, 11 and 17 percent, respectively. Mexico, which exports approximately 89 percent of its annual output, is expected to be the top exporter, with shipments totaling 49,000 tons. Peru, Greece, Spain and China are the other top suppliers of fresh asparagus. Exports of fresh-market asparagus from the United States in 2001, are estimated at about 15,000 tons, down from 18,000 tons in 2000. During the first 6 months of 2001, U.S. exports of fresh-market asparagus totaled 12,732 tons valued at \$35 million, down 20 in volume and 22 percent in value, from the same time last year. Peruvian exports of processed asparagus in 2001 are estimated at 77,000 tons, up 10 percent from 2000.

### United States

Despite import pressure from foreign asparagus producers, the United States remained the world's second largest producer of fresh asparagus, after Peru. In 2001, U.S. production of fresh asparagus is estimated at about 68,000 tons, down slightly from the previous year. In 2000, California, Washington, and Michigan accounted for over 95 percent of the fresh-market output in the United States with the peak harvest occurring in the spring. During this same period, Michigan accounted for 32 percent of the total U.S. processing (canning and freezing) production. Other states producing smaller amounts of asparagus, mostly for processing, include New Jersey, Illinois, Maryland, Indiana, Oregon, and Minnesota. In 2001, U.S. per capita use of fresh asparagus is forecast at 1.0 pound, unchanged from 2000. Improved off-season availability and increasing health awareness have likely helped maintain asparagus demand at this level.

During the first 6 months of 2001, U.S. exports of fresh green asparagus totaled 13,000 tons valued at \$35 million, down 20 percent in volume from the same period in 2000. This decline was due mainly to reduced shipments to Canada, Japan, and Switzerland, which accounted for 92 percent of total exports. From 1994 to present, U.S. exports of asparagus to

the world have continued to decline, due mainly to a strong U.S. dollar and competition from EU countries and Mexico. During this period, Mexico has accounted for the large growth in market share lost by the United States.

## **Mexico**

Mexican asparagus production for marketing year (MY) 2001 is forecast at 55,000 tons, up 9 percent from the revised volume in 2000. The increase in volume is attributed mainly to new plants reaching maturity, higher yields, and producers converting to more efficient irrigation systems. Mexico's primary asparagus crop is harvested in Baja California and Sonora from late December through early April. A smaller crop is harvested from late June through September in the Bajio region of Guanajuato. Green asparagus remains the predominant variety grown in Mexico.

In MY 2001, fresh asparagus exports from Mexico are estimated at 49,000 tons, up 12 percent from the revised level in the previous year. In 2000, nearly all of Mexico's asparagus production was exported to the United States, with most of the rest going to the United Kingdom. Mexico's asparagus exports to the United States peak from the last week of December to January 31, when U.S. supplies are low and prices are higher. But, with increasing entrance of Peruvian asparagus into the United States during this time, market prices have declined. In the past, most of Peru's asparagus output during this period was used for processing, but recently it has been going into the fresh market.

## **Peru**

Production of asparagus in Peru in MY 2001 is estimated at 180,000 tons, up 7 percent from the revised volume in the previous season. Reduced international demand and lower wholesale prices were the primary reasons for this season's revision. According to the U.S. Agricultural Attache's office in Lima, Peruvian asparagus producers are concerned with limited international demand contrasting with increasing supply, with the consequent price fall. Peru is one of the few countries where high quality asparagus is produced year round, due to warm and favorable weather, because asparagus plants do not enter a dormant stage. Peru produces asparagus for two different markets; green asparagus for the United States, and white asparagus for the European market. Green asparagus, accounting for about 35 percent of total output, is packed and exported in 5 kilogram boxes, while white asparagus is processed and exported in cans or jars.

Asparagus is Peru's second most important agricultural export, accounting for about 20 percent of total agricultural exports. In 2000, fresh asparagus exports totaled 35,000 tons, down 5 percent from 1999, due mainly to a decrease in international demand. Peru's most important processed asparagus buyers are Spain, the Netherlands, France, Germany and Denmark. The United States continues to be Peru's best customer for fresh asparagus, accounting for about 80 percent of the market in 2000. Peru exports its fresh asparagus to the United States by air.

Reportedly, Peruvian asparagus producers now worry about the oversupply and weakened world demand for asparagus; many believe that the world asparagus market has reached maturity. Since asparagus supply in the United States has increased faster than demand, Peruvian exporters have seen a sharp reduction in prices. For example, in 1990, a 5-kilogram box of fresh asparagus sold for \$50 and now it brings about \$9. Chinese exports of asparagus to competing markets are another source of worries for Peruvian asparagus producers. Ninety percent of Peruvian agricultural exports, including asparagus, enter the European Union duty free. Nevertheless, Chinese asparagus is still cheaper than Peruvian asparagus, despite the 16 percent import duty. Although China only affects the processed asparagus market, its sheer availability has sharply reduced asparagus prices in Europe over the past two years.

## **Greece**

Production of fresh asparagus in Greece in 2001 is estimated at 30,000 tons, unchanged from the previous year. Greece produces both white and green asparagus, which are harvested from early February to mid-May, allowing it to be marketed earlier than product grown elsewhere in Europe. In Greece, asparagus usually produces 12 to 13 years before replanting. Harvesting asparagus in Greece is highly labor intensive, employing foreigners at a cost of about US\$18.00 per day. All other field practices are mechanized. Domestic consumption of asparagus in Greece is limited, fluctuating between 6 and 7 percent of the annual output.

Over 70 percent of Greek asparagus production is exported to Germany, with smaller amounts going to France, Spain and the Netherlands. Spain also buys second quality product, mainly for canning. In Greece, there are a number of problems in the packaging and marketing of asparagus that need to be resolved (including uniformity of product size when packed, appearance, effective promotions, etc.), for the product to gain market share in Europe. At present, Greece's main competitors in the European markets are France, Spain, and the Netherlands.

On the policy side, Greek farmers use the EU Regulation No. 2328/90, which provides subsidy supports (cultivation supports) for purchasing machinery and crop installation (soil improvements and genetics). These supports fluctuate according to geography from 40 to 50 percent of the total investment. Also, EU Regulation No. 866/90 provides funding for up to 45 to 50 percent for processing and packing plants. Asparagus is considered to be among the best alternatives for Greek farmers who utilized land resources for less marketable crops under the CAP.

## **United Kingdom**

Asparagus production in the United Kingdom (U.K.) remains small. In CY 2001, output is estimated at 1,799 tons, up slightly from 2000. The principle growing areas are Scotland, Norfolk, Suffolk, Cambridgeshire, Lincolnshire, Cornwall, and Kent. Purple and white asparagus remain the principle varieties grown.

In recent years, U.K. consumers have moved away from the traditional bundles of non-trimmed spears to trimmed spears and tips, both in bundles and pre-packs. Pre-packs of baby varieties are supplied predominantly by Peru, Thailand and Chile.

Fresh asparagus imports into the U.K. in 2001 are estimated at 4,100 tons, up 3 percent from the revised level in 2000. U.K.'s exports of fresh asparagus are small, generally less than 100 tons.

## **Spain**

Production of asparagus in Spain in 2001 is estimated at 63,000 tons, up slightly from the previous year. Asparagus harvesting in Spain begins in mid-January for the extra early varieties in Andalucia, and ends in August in the northern producing regions.

Consumption of asparagus in Spain increased substantially during the early 1990s, but has stabilized over the past few years. Fresh consumption in 2001 is estimated at 34,000 tons, down 6 percent from 2000. Most Spanish consumers prefer fresh green asparagus for daily cooking and canned white asparagus for special occasions and for salads.

In 2001, Spanish exports of fresh asparagus are estimated at 20,500 tons, up 7 percent from the previous year, due to increased demand in EU countries. The EU countries are the primary markets for fresh green asparagus exports from Spain. Imports of fresh asparagus into Spain remain small, taking place mostly during the off-season months between October and January. Peru, Greece and Morocco are the primary suppliers of fresh asparagus to Spain.

## **Japan**

Production of fresh asparagus in Japan in CY 2001 is estimated at 28,700 tons, up 8 percent from 2000, due mainly to an increase in planted area and crop maturity. Japan produces asparagus from February through November, with the peak season in May and June. Hokkaido, Nagano and Nagasaki prefectures are the major regions for asparagus production. Japanese producer co-ops have been encouraging farmers to switch their production, especially from rice, to more profitable crops such as asparagus, leaf vegetables, etc. As a result, the asparagus acreage and output have marginally increased. However, with sufficient volumes of fresh asparagus available in the United States through June, a decline in Japan's asparagus production could represent a growth opportunity for U.S. asparagus growers and exporters.

The overall market for fresh asparagus in Japan has been relatively stable in recent years, with an annual disappearance ranging between 44,000 and 52,000 tons, which are shared about evenly between domestically produced asparagus and imported product. Fresh asparagus is marketed year-round in Japan with a number of foreign suppliers participating in the market. Mexican asparagus dominates the market from January to March; U.S. volume peaks from March through May, while

volumes of domestic asparagus are heaviest in May and June. Asparagus from Australia is available in the fall and winter, while the Philippines ships asparagus to Japan almost year-round.

Because of Japan's sluggish economy, price has become the determining factor for marketing asparagus to Japan. Many supermarkets only market asparagus at retail prices ranging from 100 to 200 yen (\$0.80 to \$1.60) for a bundle of 100 grams, since the prices in this range are the most affordable by consumers. In the spring of 2001, many Japanese asparagus importers reduced their import volumes from the United States and Mexico because their profit margins were significantly reduced due to the exchange rate at approximately 125 yen to one U.S. dollar. In fact, one Japanese importer reported that if the exchange rate goes beyond 120 yen to one U.S. dollar, his profit margin is significantly reduced. Currently, fresh domestic asparagus is sold at 150 to 200 yen (\$1.20 to \$1.60) for a bundle of 100 grams in Tokyo supermarkets. A typical bundle consists of 3 to 4 green asparagus spears. Domestic asparagus is traded at 1,200 to 2,100 yen (\$9.65 to \$16.80) for one kilogram at Tokyo's Ohta Wholesale Market.

## **Switzerland**

Production of asparagus in Switzerland remains small, accounting for about 2 percent of domestic consumption annually. Switzerland continues to be a very good market for U.S. fresh asparagus because of the Swiss preference for large-stalked asparagus. In 2001, Swiss imports of fresh green asparagus are estimated at 5,600 tons, up 6 percent from the previous year. In CY 2000, U.S. exports of fresh green asparagus to Switzerland totaled 1,582 tons, down 25 percent from the previous year, due to competition from other EU producers and a tariff-rate quota system. Under this system, imports from May 1 to June 15, the U.S. primary export season to Switzerland, are subject to a maximum duty of SF 734 (US\$440) per 100 kilograms.

## **Germany**

Germany is a major producer and consumer of fresh asparagus. Production of fresh asparagus in 2001 is estimated at about 44,000 tons, down 2 percent from 2000. German imports of fresh asparagus during this same period are estimated at 31,000 tons, up slightly from the previous year. Greece continues to be Germany's primary supplier of fresh asparagus. U.S. exports of fresh green asparagus to Germany remain small, with only marginal potential for growth due to strong competition from other EU suppliers.

*(The FAS Attache Report search engine contains reports on the Asparagus industries for 7 countries, including Mexico, Peru, United Kingdom, and Japan. For information on production and trade, contact Emanuel McNeil at 202-720-2083. For information on marketing contact Elizabeth Mello at 202-720-9903.)*

## United States Horticultural Exports to Asia

The Asian region accounts for more than 31 percent of the world market for U.S. horticultural exports. From June/May 2000/01 total U.S. horticultural exports to Asia were approximately \$3.5 billion, up 9 percent in value from the preceding year. Japan is the largest Asian export market at more than \$1.7 billion, accounting for nearly half of U.S. horticultural exports to Asia. Hong Kong is the next largest export market accounting for 12 percent of U.S. sales to the region. Total exports to Hong Kong exceeded \$428 million. Exports to Taiwan amounted to 10 percent of the Asia market, with an export value of over \$363 million. South Korea accounts for 8 percent of the market, totaling approximately \$289 million. U.S. horticultural exports to China were more than \$143 million, which represents 4 percent of the market. The Philippines, Singapore, Malaysia, India, and Thailand round out the top ten Asian markets. Citrus and deciduous fresh fruits are among the leading horticultural commodity exports to Asia in 2000/01.

### Top Export Markets

The 2000/01 yen to dollar exchange rate is currently at Y120 to US\$1; a 10-percent increase from the same period last year. Despite a decreasing yen value and continued economic stagnation, Japan remains the top market for U.S. horticultural exports to Asia. Exports in 2000/01 are valued at \$1.7 billion, comparable to last year's June-May level. Exports continue to rebound from the 1997/98 Asian financial crisis when exports fell to \$1.6 billion. Frozen vegetables and fresh citrus fruits are the leading U.S. horticultural exports to Japan.

Hong Kong continues to be an important market for U.S. exports, second only to Japan. In 2000/01, exports amounted to \$428 million, a 3 percent increase from the Asian financial crisis level of \$415 million. Hong Kong is a vital transshipping channel for U.S. horticultural exports into mainland China, particularly for fresh citrus and deciduous fruits.

U.S. horticultural exports to Taiwan, led by fresh deciduous fruits and miscellaneous fruit and vegetables, exceeded \$363 million in 2000/01. Apples are the most popular imported fruit consumed in Taiwan. For June-May, U.S. exports of apples were more than \$2.5 million, a 159-percent increase from the previous year. Canada and the United States are the only countries permitted to export apples to Taiwan in quantities unrestricted by quota. Other importers are restricted by specific quota volumes and phytosanitary requirements. These quotas are expected to be lifted once Taiwan becomes a member of the WTO.

U.S. horticultural exports in 2000/01 to Korea continue to recover from the Asian financial crisis. In 2000/01, U.S. horticultural exports surpassed the pre-financial crisis export value by rising to

almost \$289 million, up 1 percent from their 1995/96 value. Miscellaneous fruits and vegetables and fresh citrus fruits were leading growth items.

Despite a Minimum Market Access Quota (MMA), U.S. export of fresh oranges into Korea reached record levels in 2000/01. The \$58 million in orange exports marked a 100-percent increase from last year's export level. Fresh orange non-quota imports exceeded quota imports for the first time, and by a large margin. Three variables underpinned the market's demand for imported oranges: consumers' positive perception of California oranges, ample supplies of reasonably-priced quality U.S. oranges, and higher-cost domestic produce. Korea is now the United States third-largest market for oranges. However, industry expectations of steep price increases for California citrus, specifically for oranges, are expected to dampen import demand the latter half of this year. Major competitors to U.S. orange exports include Australia, New Zealand, and South Africa.

U.S. exports of horticultural commodities into China reached record levels in 2000/01, totaling more than \$143 million. This record level marked a 103-percent increase from 1999/2000. Other food preparation commodities, french fries, fresh oranges and grapes were the leading horticultural exports.

The Agreement on Agriculture signed in April 1999 and the Bilateral WTO Market Access Agreement of November 1999 are expected to continue lowering trade barriers in China. While the long-term implications remain to be seen, U.S. horticultural exports into China have been increasing. For the period June-May 2000/01, U.S. orange exports into China rose by more than 500 percent from the previous year to \$14.5 million. French fries exports amounted to more than \$17 million, while other food preparations topped the export market with \$32 million in sales.

Rounding out the top 10 Asian horticultural export markets are the Philippines, Singapore, Malaysia, India, and Thailand. Combined U.S. horticultural exports to these five countries in 2000/01 totaled approximately \$448 million, accounting for approximately 13 percent of the Asian market.

### **Top Horticultural Exports**

U.S. exports of french fries, fresh oranges, and fresh grapes continue to recover from the Asian financial crisis. During 2000/01, french fries exports totaled more than \$288 million, a 20 percent increase from 1996/97 fresh orange exports grew by 27 percent, totaling more than \$232 million; and fresh grapes grew by 25-percent, amounting to more than \$158 million.

## **World Trade Situation and Policy Updates**

### **Mexico and U.S. Continue Dialog on Protocol for U.S. Potato Access**

On August 15, Mexico officially closed the border to U.S. table stock potato exports citing alleged nematode detections. As a result of technical discussions with APHIS, SAGAR reopened the border to the select few U.S. states still eligible to export table stock potatoes to Mexico. APHIS and SAGAR are still negotiating a protocol. APHIS is seeking a systems approach which would include surveys and documentation demonstrating production area freedom, washing, treatment with sprout inhibitor, phytosanitary inspection at point of origin, and sealing of conveyances. The August 28, APHIS proposal provides new phytosanitary assurances for Mexico, while at the same time offering new opportunities for previously banned states to qualify to export. U.S. potato exports fell from approximately \$21 million in 1999 to less than \$16 million in 2000.

### **Greek Peach Canners Benefit from Low Costs; Maintain Pressure on U.S. Industry**

Greek processors are paying 15 percent less for raw fruit than last year and production may well exceed last year's level of 397,000 tons canned net weight. These factors coupled with an appreciating dollar exchange rate will continue to make the U.S. market attractive for Greek exports. Last year, U.S. imports from Greece increased 77 percent from the previous year, totaling a record 1.7 million cases and equaling 10 percent of U.S. production. Greek growers will receive a price of \$216 per metric ton for 300,000 tons of raw fruit delivered to processors. Processors will only have to pay \$174 per metric tons while a direct subsidy to growers will provide the remaining \$42. Growers will receive an additional \$103 per metric ton for 90,000 tons of fruit delivered to withdrawal. By comparison U.S. processors will pay \$261 per metric ton, which about \$86 per metric ton more than Greek processors are paying.

### **Commerce Extends Antidumping Review of Thai Canned Pineapple**

On August 9, the Department of Commerce's International Trade Administration (ITA), announced that the final results of the antidumping review on canned pineapple from Thailand would be extended until October 9, 2001. This is the fifth review since the original investigation in 1995 determined that Thai producers and exporters were selling canned pineapple below fair market value. Earlier this year, a sunset review by the ITA determined that the threat of injury to the U.S. pineapple industry still existed and that another five yearly reviews will take place following the October 9 decision. Last year, the United States imported 316,852 metric tons (MT) of preserved pineapples, of which Thailand supplied 32 percent.

## **Mexico Announces the Financing Program for the 2000/2001 Sugar Crop**

The Secretariat of Agriculture, Livestock, Rural Development, Fisheries and Food, (SARGARPA), announced a one-time program to help the sugar industry obtain funds to pay outstanding debts for the 2000/2001 marketing year. The Mexican Federal Government will provide 1.2 billion pesos (\$131 million) to sugar millers to pay outstanding debts to sugarcane producers. Sugar mills will warrant the funds through their sugar inventories with sugar deposit certificates. Bancomexico, Mexico's EXIMBANK will manage the funds. The program is necessary because of Mexico's over-production of sugar, which depressed prices to processors, reducing their cash flow and hence monies available to pay sugarcane producers. The Government's program will address only about 25 percent of the problem, as the outstanding debt of sugar millers is estimated at 4.5 billion pesos.

## **Spanish Producers Push for Extension of EU Tree Nut Improvement Program**

Under EU regulation 2145/91, a tree nut varietal improvement program for Spain, and other member states, has been in effect since 1991. Due to expire last year, the Commission approved a one-year extension in the face of extensive pressure from Spain. Under the program, Spanish almond and hazelnut growers have been eligible to receive payments of up to 475 Ecu/hectare. Spain's government has noted that as many as 140,000 families derive income from nut farming; with many of these living in some of Spain's poorest areas. At a recent EU Agriculture Council meeting, Spain's Minister of Agriculture argued for yet another extension of the program. In response, Commissioner Fischler stated that the Commission will study social, economic and environmental problems that could be caused by the suspension of the aid and will bring forth proposals to address them, if necessary. Spain is the world's second largest producer and exporter of almonds after the United States. Spain is also a significant market for U.S. almonds, with U.S. shipments valued at \$65 million in CY2000.

## **Chile Approves Imports of Apples and Pears from Oregon and Idaho**

Chile recently agreed to allow imports of apples and pears from Oregon and Idaho. Before this decision, Chile only allowed apples and pears from the state of Washington. Access for the three states is limited to approved production areas with no apple maggot quarantines in place. This new market opportunity is expected to eventually result in combined Oregon and Idaho apple and pear sales of \$2 million annually. USDA continues to work with Chile's Ministry of Agriculture for access for apples and pears from California. In marketing year 1999/2000 (July-June), Washington state apple shipments to Chile totaled 129 tons, valued at nearly \$50,000. A lower Washington state apple crop, higher prices, and a stronger U.S. dollar vis-a-vis the Chilean peso limited shipments to Chile last season.

## **Organic Updates**

### **New Organic Legislation in Poland Requires Import Certification**

On March 16, 2001, the Polish Parliament approved legislation on organic farming requiring all organic products to obtain a certificate of compliance for production and trade within Poland. According to this legislation, which goes into effect October 1, 2001, imported products, including those which have been certified by EU institutions need to be re-certified in Poland. Once Poland enters the EU, products certified in the EU will no longer require re-certification. The Polish Department of Agriculture estimates that there will be 10,000 organic farms in Poland by 2009, accounting for only 0.5 percent of agricultural land, but 10 times the current number. Part of the reason for this increase is the current government subsidies which allow for up to \$150 per hectare of organic production. In addition, the cost of certification is partially subsidized. Organic farming is the only agricultural sector in Poland that receives direct financial support from the government. To read the full report on the organic farming in Poland, go to <http://www.fas.usda.gov/scripts/attacherep/default.asp> and request report PL1024.

### **New Zealand Market for Organic Food Driven by Food Safety, Nutrition, and the Environment**

The demand for organic food products in New Zealand has risen significantly due to consumers' concern about food safety and nutrition, the environment, and the debate over genetically modified foods. New Zealanders are very interested in the effects of food upon their personal health and the health of their families. Bio-Gro (a New Zealand organic certification agency and the most well-known organic trademark) estimates domestic consumption of organic foods in 2000 at approximately NZ\$40 million (US\$17 million), and growing 30 percent per year.

Organic products in high demand in New Zealand include baby foods, flour, dried fruits, nuts, and tomato based products, and other processed products. U.S. companies have an advantage in this market because they are known as reliable suppliers of high quality, innovative organic products. The disadvantages for US products are that the weak New Zealand dollar makes them more expensive, and the United States is perceived as a large producer of genetically modified foods.

Organic farming has been practiced in New Zealand by a minority of producers for some time, although it has been recognized as a realistic alternative only in the past 15 years. According to Bio-Gro, current exports of organic products from New Zealand are more than NZ\$60 million (US\$25 million). Japan is the largest market for New Zealand organic exports (47 percent) followed by Europe (33 percent), Australia (5 percent), United States (4 percent) and other markets (11 percent). To read the full report on the organic market in New Zealand, go to <http://www.fas.usda.gov/scripts/attacherep/default.asp> and request report NZ1033.

## **Benelux Organic Food Market: A Challenge Worth Exploring**

Below is the summary of a new, detailed report from the FAS office in the Netherlands on the market for organic food in the Benelux countries (Belgium, The Netherlands, and Luxembourg). To read the full report, go to <http://www.fas.usda.gov/scripts/attacherep/default.asp> and request report NL1050.

1. The organic food market in the Benelux countries is small but growing.
  - Luxembourg has the highest consumption of organic products per capita across the EU;
  - Belgium was one of only four countries in the European Union boasting an annual growth rate between 25 and 30 percent in the organic food sector of the market. The other three are Denmark, Sweden and the UK.
2. In addition to these high growth rates, Belgium is a country of high potential interest to US exporters as it imports approximately 50 percent of organic food consumed, and this is set to rise as demand for prepared meals and a more diverse range of products increases.
3. Meanwhile, there are a number of areas in which U.S. exporters need to exercise caution as they could potentially act as a barrier to the development of the market,
  - key issues relating to certification, packaging, labeling and logistics;
  - a perceived weak European focus among U.S. suppliers as a whole, along with a perceived lack of understanding of the peculiarities of each individual market (e.g. consumer motivations, distribution routes);
  - the fact that a large proportion of imported organic produce entering each of the three Benelux countries comes from within the EU.
4. Providing U.S. exporters address the issues above, there are a number of product areas in which U.S. exporters could gain share - i.e. fresh fruit and vegetables, wine, pulses, oils and fats, food ingredients, breakfast cereals and a host of other processed foods.

There appears to be a degree of opportunity in virtually all product sectors for the U.S. exporter provided that the market is approached in the right way. Key success factors in this respect revolve around: product quality, packaging, establishing solid relationships with key importers, marketing mix, and tackling distribution issues.

For more news on organics, see HTP's newsletter "Organic Perspectives," available at the HTP home page: [www.fas.usda.gov/http/organics/organics.html](http://www.fas.usda.gov/http/organics/organics.html).

## **Export News and Opportunities**

Are you interested in exporting but hesitating because you are concerned about getting paid? If so, do not overlook the billions of dollars the U.S. Department of Agriculture (USDA) makes available to help facilitate sales to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without credit guarantees. Invest the time to learn more about the Export Credit Guarantee Program (GSM-102) and Supplier Credit Guarantee Program (SCGP) to increase your sales and lower your risks. Use GSM and SCGP to avoid possible importer and foreign bank defaults on payments and ensure that American farm and food products continue to move to markets around the world. USDA does not provide financing, but it guarantees payments due to U.S. exporters in case the foreign banks or importers default. As of August 17, horticultural exporters have registered \$3.17 million in sales under SCGP. Sales have been registered under SCGP for wine, fruit/vegetable concentrates, fresh fruit, frozen fruit, fruit juice, and tree nuts. In FY 2001, the SCGP has helped to facilitate horticultural sales to the China/Hong Kong Region, Egypt, Israel, Japan, Korea, Mexico, the Southeast Asia Region, Taiwan, and Turkey.

You may learn more about GSM-102 and SCGP regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity on the Internet at:

**<http://www.fas.usda.gov/export.html>**

### **GSM-102**

Since the last publication, USDA has amended the GSM-102 Programs in Jordan, Kazakhstan, the South America Region, and South Korea. On August 10, USDA amended the Jordan GSM-102 program to increase the program allocation from \$50 million to \$70 million. Funds available for horticultural registrations is \$10 million. All other terms and conditions of previously announced remain the same. The FAS announcement pertinent to this allocation is PR-0228-01.

On August 8, USDA decreased the program allocation for Kazakhstan from \$10 million to \$5 million. All other terms and conditions of previously announced remain the same. The FAS announcement pertinent to this allocation is PR-0218-01.

On August 7, USDA increased the South America Region (Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Peru, and Venezuela) GSM-102 program allocation from \$370 million to \$490 million. All other terms and conditions of previously announced remain the same. The FAS announcement pertinent to this allocation is PR-0208-01.

On August 6, USDA increased the South Korea credit guarantees available for horticultural registrations from \$125 million to \$140 million. The overall country program allocation was increased from \$590 million to \$650 million. All other terms and conditions of previously announced remain the same. The FAS announcement pertinent to this allocation is PR-0207-01.

Exporters may apply for credit guarantees on a first-come, first-served basis to cover sales of eligible commodities to the aforementioned markets.

The GSM-102 program makes available credit guarantees for sales of U.S. agricultural commodities overseas. USDA does not provide financing, but guarantees payments due from foreign banks. USDA typically guarantees 98 percent of the principal and a portion of the interest. The GSM-102 program covers credit terms from 90 days to 3 years.

Under the program, once a firm sale exists, the qualified U.S. exporter applies for a payment guarantee before the date of export. The U.S. exporter pays a fee calculated on the dollar amount guaranteed, based on a schedule of rates applicable to different lengths of credit periods. The CCC-approved foreign bank issues a dollar-denominated, irrevocable letter of credit in favor of the U.S. exporter, ordinarily advised or confirmed by the financial institution in the United States agreeing to extend credit to the foreign bank. The U.S. exporter may negotiate an arrangement to be paid as exports occur by assigning the U.S. financial institution the right to proceeds that may become payable under the guarantee, and later presenting required documents to that financial institution. Such documents normally include a copy of the export report. If a foreign bank fails to make any payment as agreed, the exporter or the assignee may file a claim with USDA for the amount due and covered by the guarantee. USDA will pay the U.S. bank and will take on the responsibility of collecting the overdue amount from the foreign bank.

### **Supplier Credit Guarantee Program**

Since the last publication, USDA has increased the Kazakhstan SCGP program allocation from \$5 to \$10 million. All other terms and conditions as previously announced remain the same. The FAS announcement pertinent to this allocation is PR-0220-01.

The SCGP is unique because it covers short-term financing extended directly by U.S. exporters to foreign buyers and requires that the importers sign a promissory note in case of default on the CCC-backed payment guarantee. The SCGP emphasizes high-value and value-added products, but may include commodities or products that also have been programmed under the GSM-102 program.

The SCGP encourages exports to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without CCC guarantees. Under the SCGP, CCC guarantees a portion of payments due from importers under short-term financing (up to 180 days) that exporters have extended directly to the importers for the purchase of U.S.

agricultural commodities and products. These direct credits must be secured by promissory notes signed by the importers. CCC does not provide financing but guarantees payment due from the importer.

### **GSM-102 and SCGP**

The following tables present the FY 2001 GSM-102 and SCCP for which USDA has allocated credit guarantees for sales of U.S. horticultural products. The table also includes horticultural sales (exporter applications received) that have been registered under GSM-102 and SCGP. For most countries and regions, exporters may apply for credit guarantees on a first-come-first-served basis to cover sales of any of the eligible commodities published in FAS program announcement PR 0096-01, issued March 20, 2001 or as superseded. The following horticultural products are eligible under the export credit guarantee programs: dried fruit; fresh fruit; frozen fruit; canned fruit; 100-percent fruit juices; fruit and vegetable concentrates, pastes, pulps and purees; honey; hops or hops extract; beer; tree nuts; fresh vegetables; canned vegetables; dried vegetables; wine; and brandy. The General Sales Manager will consider requests to establish an SCGP and/or GSM Program for a country or region or amend an authorized program to include horticultural commodities and products that are currently not eligible.

*(For further information on the SCGP or GSM-102 Program for horticultural commodities, contact Yvette Wedderburn Bomersheim on 202-720-0911 or Rochelle Foster on 202-720-2936).*

# Think outside the borders.

Ever felt like you were trapped inside a cookie cutter, with all your competitors chasing the same customers?

Well, **96 percent of the world lives outside our borders** and, with a little effort and a little help, you can reach them.

**USDA's Ag Export Services** can put your message on line and in newsletters, translated into dozens of languages and in front of **buyers in 75 countries for \$15**. And that's just for starters.

*To learn how you can sell your food or fiber products outside our borders, contact **USDA's Ag Export Services**.*

Phone: 202-690-3576 • Fax: 202-690-0193

Email: [startagexporting@fas.usda.gov](mailto:startagexporting@fas.usda.gov)

## ALL SALES ARE FINAL

NTIS electronically stores our collection of almost 3 million items and custom-reproduces a single copy specifically for your order. Therefore, NTIS does not accept cancellations, requests for modifications, or returns for credit or refund. All sales are final. If you believe the item you received is defective or if we made an error in filling your order, please contact our Subscriptions Department via e-mail at [subscriptions@ntis.gov](mailto:subscriptions@ntis.gov) or by phone at 1-800-363-2068 or (703)605-6060.

## SINGLE COPIES

To order, call NTIS Sales Desk 1-800-553-NTIS (6847) or (703) 605-6000; fax to (703) 605- 6900; or E-mail to: [orders@ntis.gov](mailto:orders@ntis.gov).

For single copies, add \$5 handling fee per total order for U.S., Canada, Mexico; \$10 per total order for all other countries. RUSH service is available for an additional fee; please call the NTIS Sales Desk for details.

contact us at the address shown above.

Summaries and selected tables from many Foreign Agricultural Service world market and trade reports are available electronically. The reports include U.S. Export Sales (available electronically after 8:30 a.m. on release day); Grain: World Markets and Trade; Oilseeds: World Markets and Trade; Cotton: World Markets and Trade; Tobacco: World Markets and Trade; World Agricultural Production; the early release version of World Horticultural Products and U.S. Export Opportunities; and Tropical Products: World Markets and Trade (all available electronically after 3:00 p.m. Washington DC time on release day) as well as Sugar: World Markets and Trade; Livestock and Poultry: World Markets and Trade; Dairy: World Markets and Trade, and U.S. Planting Seed Trade (available within a week after release.)

You can read the reports on the FAS home page (<http://www.fas.usda.gov>). The reports remain "current" until the succeeding issue is available. Older issues are available in the archives section of the home page. We also make selected cover articles and graphics available from these publications, in a separate section of the site. Reports are also available from the Economic Bulletin Board at Stat-USA, on the same schedule. For more information, you may contact Stat-USA at (202) 482-1986 (Monday-Friday, 8:30-5:30 p.m. Washington, DC time.)

For more information on the FAS home page, contact Glenn Kaup, tel. (202) 720-3329; fax. (202) 720-3229; or via e-mail [kaup@fas.usda.gov](mailto:kaup@fas.usda.gov)
